I. SECTION NUMBER 1

Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states.

II. SECTION NUMBER 2

Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states.

III. SECTION NUMBER 3

Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states.

IV. SECTION NUMBER 4

Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states.

FIG. 1. A wide blue figure with a caption that spans two lines of text in the column.

V. SECTION NUMBER 5

Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states.

VI. SECTION NUMBER 6

Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks pro-

vide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states.

VII. SECTION NUMBER 7

Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states.

VIII. SECTION NUMBER 8

Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states. Tensor networks provide an efficient description of low-entangled quantum states.

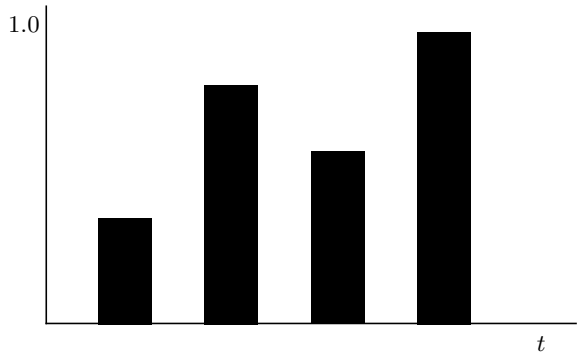

FIG. 3. A vector plot drawn with rules, with axis labels.
